

Engineering Services

Brown Deer Technology

BDT provides hardware and software engineering services for commercial and government customers. With over 25 years of experience, BDT offers unique expertise to deliver solutions to challenging hardware and software engineering projects.

Projects supported include RD&E and T&E support for early computer hardware devices, development of parallel programming APIs for multicore SoC processors, benchmark and algorithm development, and computer processor architecture design.

Engineering Services

- Digital systems and computer architecture design
- FPGA and embedded systems engineering
- Hardware-software co-design
- Multicore SoC programming and API development
- Accelerator/co-processor programming
- Early test and evaluation of prototype hardware

Getting Started

- Contact us to discuss how we can support your next project
- We provide fixed-fee and T&M cost structures
- Commercial and government customers supported
- Cleared personnel available
- For more information contact: services@browndeertechnology.com
